

TR-i: fixed or pivoting – your choice

with Memento™

NEW

The highly popular TR series has now been developed to include three models equipped with the intelligent Memento™ timer function. The timer's unique memory function can reduce energy consumption by up to 75%.

A new feature of TR-i towel warmers is that they can be pivoted, giving greater flexibility. You decide whether you want to fix your warmer to the wall in one position or enable the pivoting function. Use the extra wall bracket that comes with the warmer to mount it on the wall in a fixed position.

The TR-i towel warmers are reversible and can be installed with the timer in any corner, making it easy to position in any way.

TR-i is equipped with a smart, separate connection box for simple electrical connection/towel warmer docking, offering extraordinary flexibility.
