

Flex I – pivoting arms in a small space

with or without Momento™

Flex I has several pivoting arms that you can turn, independently of each other, any way you like, either to make optimum use of the drying possibilities or to make Flex I as small as possible. The tubes are straight, making it easy to hang up and take down towels.

Flex I is available in several versions. Select a model with 2–6 arms that can be pivoted individually up to 180 degrees, which means that you can position the arms to the left and the right.

If you want to save money and conserve the environment, we recommend that you choose a Flex I with the Momento™ timer function.

Electric towel warmer

Heat	Electric heating cable. ⚡
