

Nivå – our biggest towel warmer makes a huge impression

Momento™ option

Nivå is a nice combination of rectangular side bars and round tubes between them. Every second group of tubes is curved and open at the side and is positioned further away from the warmer. This makes Nivå easy to use and increases the drying effect.

Nivå is suitable for the larger bathroom which requires a towel warmer that can make a huge impression.

Combined towel warmer

Heat Water-filled. 
 Choose between an electric heating element or connect it to the radiator circuit with a radiator valve or combine to have both.
