Accessories

Drying shelf
Easy to mount on the towel warmer. It provides a warm, dry storage space for extra towels or other toiletries. Surface of polished, chrome-plated steel.

Width: 280 mm for TR45, TR55 and TR65
510 mm for TR85

With its classic design and bent tubes, Pax TR is simple to use. It is available with chrome-plated or white coated tubes.

The warmers have pivoting and movable wall brackets that uniquely lock the warmer against the underlying surface when you tighten the mounting screws. The turnable brackets allow you to position the connection box in any corner.

With its extremely low output (30–60W), the Pax TR series of towel warmers uses up to 33% less electricity than comparable competitors. We have succeeded in doing this without decreasing the drying efficiency or the heating comfort.

The TR Standard warmers are perfect for DIY installation. They are supplied with a factory-fitted cable with a plug and multi-pole switch.

TR Objekt is the professional's choice. These warmers are supplied without a cable/plug for hidden connections.

They can be combined with an external control function (timer/output regulation).
